Education

Mohan Babu University **July 2022 – May 2026**
Bachelor of Technology in Computer Science and Engineering — CGPA: 8.98/10 *Tirupati, Andhra Pradesh*

Profile Summary

Full-Stack Developer skilled in React.js, Node.js, Express.js, Python (FastAPI), and MongoDB, with experience building and deploying AI-integrated applications using LLMs, computer vision, and NLP. Delivered 3+ complete projects and a professional internship, with a focus on scalable architecture, clean APIs, and real-world problem solving.

Experience

Projxty **Aug 2025 – Oct 2025**
Web Development Intern *Remote*

- Developed responsive web interfaces using React.js and JavaScript with reusable component-based design.
- Built and integrated REST APIs using Node.js and Express.js for dynamic application features and backend operations.
- Implemented MongoDB CRUD operations and used Git, GitHub, and Postman for database management, version control, and API testing.

Projects

SmartHire – AI-Powered ATS Resume Scorer | *React, FastAPI, spaCy, Supabase, Redis* **GitHub** | **Live Demo**

- Built a full-stack ATS platform with React and FastAPI that scores resumes against job descriptions across keyword, semantic, skills, experience, project, and resume-quality dimensions, with skill validation and a skills-gap report.
- Developed NLP pipelines using spaCy and FastEmbed (ONNX) embeddings to extract skills and compute semantic similarity from PDF, DOC, and DOCX resumes, matching relevant experience even when exact keywords are missing.
- Built an automated job-ingestion pipeline that fetches openings from the career portals of six companies (Amazon, Google, Microsoft, Accenture, Cognizant, Deloitte), filters India-based roles, classifies them by role family, and indexes embeddings in Supabase for vector search.
- Developed a job-matching and recommendation engine that ranks openings against a resume-derived career profile using a weighted score of role fit, required and preferred skills, semantic similarity, experience level, and posting freshness.
- Designed REST APIs with Supabase authentication (JWT), PostgreSQL storage, and Redis caching and rate limiting; **cut the backend Docker image from about 3 GB to 834 MB** by replacing PyTorch and Chromium with ONNX and WeasyPrint.

CodeGuardian-AI – Repository Intelligence | *Node.js, RAG, LLMs, Docker* **GitHub** | **Live Demo**

- Designed an AI-powered repository-analysis platform to inspect GitHub repositories and pull requests for potential regression risks.
- Engineered a RAG pipeline combining repository indexing, dependency graphs, and semantic code retrieval for contextual PR analysis.
- Built workflows to identify potentially affected files and generate code-grounded change summaries.
- Structured the application into modular services and containerized components using Docker for deployment.

AttendAI – AI-Based Attendance Management System | *Python, Supabase* **GitHub** | **Live Demo**

- Developed a computer-vision attendance system using OpenCV and dlib for facial feature extraction and recognition.
- Implemented face- and voice-embedding similarity matching for identity verification and automated attendance recording.
- Built teacher and student interfaces with Streamlit and integrated Supabase for attendance data management.

Skills

Languages & Frameworks: Java, Python, JavaScript, FastAPI, Node.js, React.js
Backend & Databases: Express.js, REST APIs, MySQL, MongoDB, PostgreSQL, Supabase, Redis
AI / ML: LLM APIs, RAG, NLP, spaCy, Sentence Embeddings, OpenCV
DevOps: AWS, Docker, Kubernetes, CI/CD, GitHub Actions
Tools: Git, GitHub, Postman, Jupyter Notebook

Certifications

Oracle Certified Foundations Associate – Agentic AI **2026**
Oracle University *Online*

- Earned the Oracle Certified Foundations Associate credential in Agentic AI, demonstrating foundational knowledge of AI agents and agentic AI concepts.
